

PAX-8 Mouse Monoclonal Antibody(3H11)					
Catalog	TDY797C	TDY797F			
Quantity	50µL	100µL	Entrez-Gene ID:7849,	Tel: 010-80117836 Web: www.tdybio.com Swiss-Prot Acc.Q06710	
For research use only.					
Applications		Species Cross-Reactivity	y Molecular Weight	lsotype	
WB		М	48KD	lgG1	

Storage Buffer & Condition: PBS, pH 7.4, containing 0.02% sodium azide as Preservative and 50% Glycerol. Store at -20°C. Do not aliquot the antibody.

Recommended dilutions: WB 1:500-2,000

Optimal dilutions should be determined by the end user.

Specificity: The antibody detects endogenous PAX-8 proteins.

Alternative Names: PAX8; Paired box protein Pax-8

Background: paired box 8(PAX8) Homo sapiens This gene encodes a member of the paired box (PAX) family of transcription factors. Members of this gene family typically encode proteins that contain a paired box domain, an octapeptide, and a paired-type homeodomain. This nuclear protein is involved in thyroid follicular cell development and expression of thyroid-specific genes. Mutations in this gene have been associated with thyroid dysgenesis, thyroid follicular carcinomas and atypical follicular thyroid adenomas. Alternatively spliced transcript variants encoding different isoforms have been described
